

ABSTRACT

A motor driven tool, such as a pole hedge trimmer, a pole saw or the like, is provided. The motor driven tool comprises a drive unit (11) that, via a shaft tube (12) enclosing a drive shaft and being provided with a handle (16), is connected to a cutting unit (13) which is turnably secured to the shaft tube. The turnable connection is under the influence of a locking mechanism (L) which, from the normal working position of the operator, can be released by way of a control mechanism (M) arranged at a distance from the locking mechanism (L) and close to the handle (16).
